

# mindmeister Business Edition

The Business Edition of MindMeister is a modern solution aimed at organizations looking for an easy-to-use collaboration solution to enable staff to innovate effectively across office boundaries. It uses the intuitive mind mapping technique that is experiencing fast adoption in business for brainstorming and project management.

## Modern "Office 2.0" Solution

MindMeister is at the forefront of Office 2.0, a trend of moving productivity tools online and using the possibilities of the Internet to provide new and exciting functionality – access anytime and from anywhere, easy content sharing, real-time collaboration within a browser, no updates or compatibility problems.

## Made for working together

MindMeister was created to be used collaboratively – mind maps are the quintessential brainstorming and innovation tool and have lots of uses in the business world. From simple task lists to meeting minutes, document outlines or general project planning and management, MindMeister is perfectly suited to support your most critical business processes.

To get started, import your existing maps from desktop tools – or start with templates from our public maps list – and enhance them with icons, links, notes and file attachments. For project managers, MindMeister maps can track tasks with priorities, completion, due dates and owners, to then be turned into project documentation through one of the many export functions.
