

Prezi Tutorial

Prezi is a Web2.0 tool that combines concept maps, posters, and presentations, all into one very nicely integrated unit. It allows us to create non-linear presentations where we can zoom in and out of a visual map containing words, links, images, and videos. This way we can give our audience “big picture” overviews, as well as zooming in to view extreme details related to some items. So instead of slides, we create a large map and basically zoom around it while we do our presentations.

In Prezi, there are two key modes: Show mode, and Edit mode. And many things work rather differently in each.

How to change between them

Default state of Prezi when it starts is edit mode. You can see the menu centered around the 'Zebra' icon and the label 'Write'. (For your convenience, Prezi stays in Edit mode while the menu is centered around Insert and Colors & Fonts.)

You can switch to show mode by clicking the grey 'Show' ball

Prezi is in 'Show' mode now, the menu is centered around 'Show'. To go back, click on the Blue edge of the parent menu at the top left of your screen.

In Show mode, all menus hide automatically, so you can have a clean presentation screen. To bring them back, just approach the corner of your screen with your mouse.

Double click to write text or to edit existing text

The screenshot shows the Prezi interface with a text box containing the text "Doubleclick". An orange arrow points to the text box with the label "Double click to write text or to edit existing text". Below the text box, a style menu is visible with options: "Title", "Title" (highlighted in orange), "Body", and "OK". An orange arrow points to the "Body" option with the label "Change the textbox style here". In the top right corner, there is a blue circular button with two white arrows pointing left and right, labeled "drag to resize textbox". The bottom of the screen shows the Prezi logo and navigation controls.

Click on an object, and
you'll see the
Transformation Zebra

This is how you use
the Zebra.

- 1. Scan the barcode
- 2. Select the data to capture
- 3. Select the data to capture
- 4. Select the data to capture
- 5. Select the data to capture
- 6. Select the data to capture
- 7. Select the data to capture
- 8. Select the data to capture
- 9. Select the data to capture
- 10. Select the data to capture

This is how you use
the Zebra:

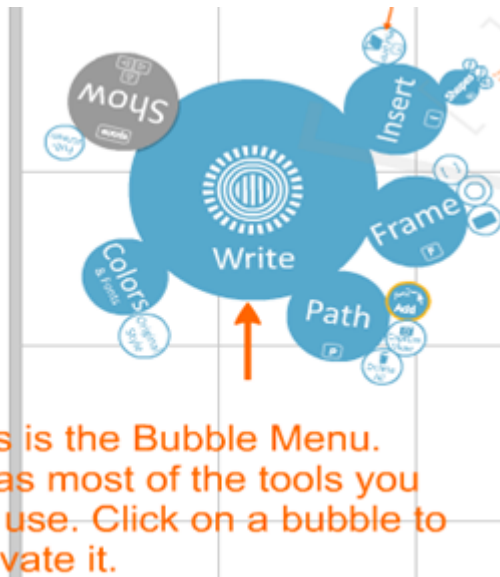

Drag middle
to **move** selected objects

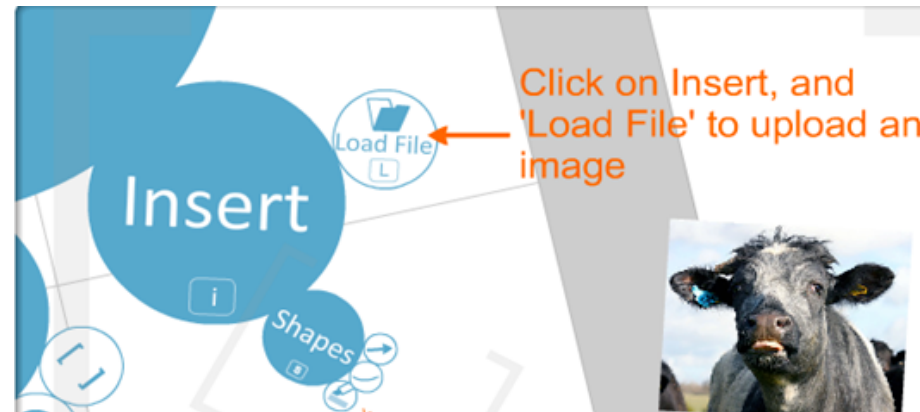

Drag inner ring
to **scale** selected objects

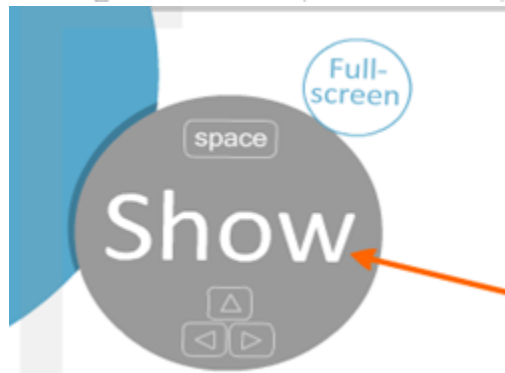

Rotate outer ring
to **rotate** selected objects

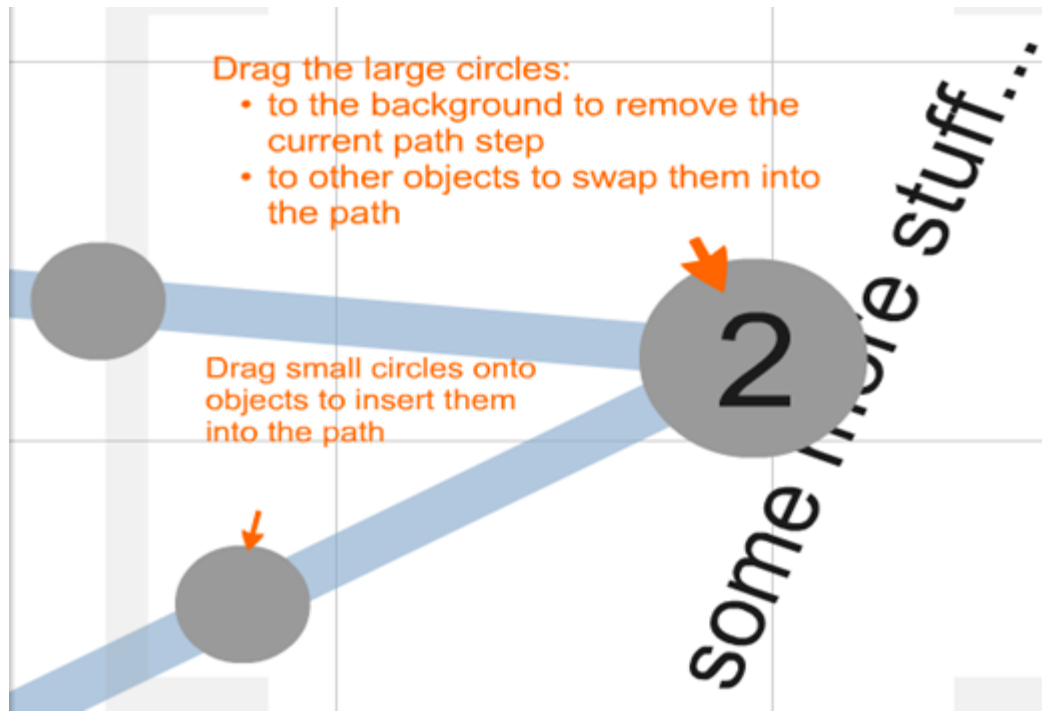

This is the Bubble Menu. It has most of the tools you will use. Click on a bubble to activate it.

Click on Insert, and 'Load File' to upload an image

To see how your words, images, and frames will appear when presenting, click on Show.

ADD PATH:

You can select the order in which you want your items to appear in your Prezi. Say this is the title I would like to be the first, then I can show the image, and may be make the last thing the video.
